With over 15 years IT experience as a full-stack developer, I've delivered numerous sites, online shops, cross-platform apps, and custom solutions. I have also run my own company, which allowed me to delve into the business, management and leadership side of tech.

What I enjoy the most about this work is to study each business and to proactively identify the areas where I can make the biggest impact. This could mean delivering profitable solutions, reducing costs or helping my co-workers work more efficiently.

This is what I strive to achieve as an IT specialist.

PROFESSIONAL EXPERIENCE

FULL-STACK DEVELOPER @ Freelance

2025 - present

- The goal was to broaden my expertise by developing projects with newer technologies.
- One such project involved developing an admin panel for a cryptocurrency datacenter.
- Another project was a Telegram bot integrated with a backoffice app.
- Technologies: React, Python, Next.js, PostgreSQL, Go

SENIOR WEB DEVELOPER @ Web Lab Space SRL, Romania

2019 - 2025

- The projects were high-traffic websites built on top of a microservices architecture.
- My chief contribution was in cutting costs by using our resources more efficiently.
- The work also involved cloud storage, video encoding, server management and DevOps.
- Technologies: Laravel, Yii, NodeJS, VueJS, Redis, Backpack

CEO / TECH LEAD @ Modern Web SRL, Romania

2014 - 2019

- We made online shops, presentation websites and cross-platform apps.
- I handled some of everything: team management, client relations, programming, sales.
- Technologies: Magento, Joomla, Yii, Bootstrap, React Native, Unity

WEB DEVELOPER @ e-reactor ApS, Denmark

2012 - 2014

- I worked on a vast portfolio of presentation websites and online shops.
- I took part in many sales calls and handled clients directly as a technical advisor.
- Technologies: Magento, Joomla, Bootstrap

TEACHING ASSISTANT @ IT University of Copenhagen, Denmark

Feb. 2013 - May 2013

- The courses that I taught in were "Intelligent Systems Programming" and "Game Development".
- The day-to-day work was about helping students with their course material.
- I also took part in grading assignments and projects.

VIRUS ANALYST @ BitDefender SRL, Romania

2009 - 2011

- The bulk of the work was analyzing malware samples through reverse engineering to deliver detection and removal solutions.
- I also researched and implemented machine-learning approaches for malware detection.
